# MASTER software CONTROL

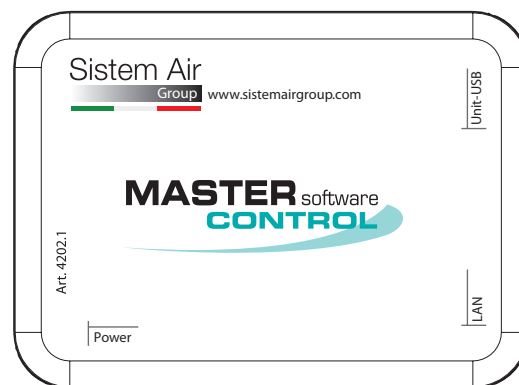

**AVVERTENZE :** La scheda Master Control deve essere alimentata con alimentazione protetta da sovratensione e da eventuali blackout. Si consiglia pertanto di collegare la scheda ad un presa di corrente collegata ad un sistema UPS, per evitare che interruzioni della corrente elettrica possano provocare danneggiamenti alla parte elettronica.

*NOTE: The Master Control board must be powered by an over-voltage and blackouts protected supply source. Therefore, it is recommended to connect the board to a socket which is connected to a UPS system, in order to avoid power cuts which may damage the electronic parts.*
